ABOUT ME

I am a highly adaptable, fast learner with strong communication skills. I'm passionate about technology and how it transforms businesses, so I enjoy not only web development but also project management and process optimization using both low-code platforms (Appian) and more custom solutions. I have practical experience working with C#, JavaScript, SQL, HTML/CSS and Appian; I'm particularly interested in roles that combine development with systems integration and technology consulting.

I am seeking an entry-level Application Development / Junior Developer position and believe my background in web applications, low-code automation and project organization makes me a good fit. **I am open to fully remote roles but also willing to work hybrid or onsite, and I can relocate if the position requires.**
